

Study Goals and Objectives

The Study Area is a five-mile segment of Lincoln Boulevard from I-10 to Manchester Avenue

The goal of this Phase 1 study is to produce a Conceptual Corridor Alternatives Study that identifies a range of feasible transportation and urban design improvements on the Lincoln Boulevard Corridor on which there is consensus amongst the jurisdictions to move forward to a Phase 2 for further analysis and refinement. The following are objectives for the study:

- **Identify goals, objectives, and visions of the jurisdictions along the Corridor**
- **Identify discrete segments of the Corridor which share common attributes**
- **Identify travel patterns along the Corridor**
- **Quantify existing and future traffic conditions on the Corridor and identify deficiencies**
- **Identify a broad range of technically feasible alternatives, and**
- **Recommend short and long term conceptual multi-modal alternatives that balance the needs for transportation capacity and aesthetic enhancements.**
